Bulletin—Pennsylvania Department of Agriculture—Published bi-monthly by direc-
tion of the Secretary. Entered as second-class matter May 15, 1940, at the
Post Office at Harrisburg, Pennsylvania, under the Act of June 6, 1900.

Pennsylvania an Agricultural State

PENNSYLVANIA is one of the great agricultural states of the Union. The Commonwealth has long been famous for its mines and its factories, but capital invested in farms, crops, stock, and farm machinery and equipment is double the capital in mining and quarrying (\$644,974,100). In total capital invested, agriculture compares very favorably with either the metal and metal products industries (\$1,915,814,000) or all other manufacturing industries of the State (\$1,754,277,000).

Pennsylvania has 169,027 farms valued at \$864,199,795, according to the Federal census of 1940. Farm implements and machinery were worth \$129,099,593. Livestock and chickens and turkeys on farms January 1, 1944 were inventoried at \$255,690,000. These three items alone represent an investment of \$1,248,989,388.

Cash income from marketings from Pennsylvania farms amounted to \$391,863,000 in 1942 and \$493,829,000 in 1943. In this respect, the State ranked 14th in the Nation. Among the States, Pennsylvania in 1943 was first in the production of cigar-leaf tobacco, second in the production of buckwheat, third in the production of clover and timothy hay and maple sugar, fifth in grapes, sour cherries and maple sirup, sixth in commercial apples and peaches, seventh in all tobacco and sweet cherries, eighth in potatoes, all cherries and timothy seed, ninth in all tame hay, and tenth in the production of all hay and pears.

Relative importance of crops within the Commonwealth and among the States is presented in some detail on page 5, and of livestock and livestock products on page 22. All estimates are preliminary, and values of crops are forecasts based upon prices received during the marketing season to December 1.

PENNSYLVANIA 1943 CROP PRODUCTION

VALUE of the principal field and fruit crops produced in Pennsylvania in 1943 is estimated at \$224,104,000, compared with \$184,562,000 in 1942, an increase of 21 percent. Combined production of field and fruit crops was about 8 percent less than last year, buckwheat, potatoes, and hay being the only crops showing an increase.

Average prices received by farmers for crops produced in 1943 are expected to be about 32 percent higher than those produced in 1942. All crops are selling at much higher prices than last year, with fruit crops showing the greatest advance.

Weather for the past 11 months averaged close to normal, temperature being deficient by 0.3° and precipitation by 1.9 inches, according to the Harrisburg office of the Weather Bureau. April experienced the coolest weather on record for that month. This was followed by the wettest May since 1908 and the warmest June in 56 years of record. Although the southwestern counties experienced the wettest July of record, rainfall was inadequate elsewhere in the State. Drought conditions, well established in the southeastern counties by August, were accentuated by the driest September of record. A cool, relatively wet October did not relieve the poor conditions prevailing at the close of September.

CORN The 1943 corn crop was 10 percent smaller than the 1942 crop—acreage was up 2 percent but yield down 12 percent. Much corn was planted late and got caught by early frosts before reaching maturity, particularly in the northern part of the State, and there was considerable soft corn in all areas.

WHEAT A reduction of 2 percent in acreage and 10 percent in yield per acre resulted in a wheat crop 12 percent smaller than last year. Heads did not fill well, grains were small, and yields below expectations.

OTHER GRAINS The 1943 season was very unfavorable for both oats and barley. Seeding was unusually late, heads filled poorly and many fields were not worth harvesting, particularly in the northwestern part of the State. Soybeans grown alone for all purposes in 1942 totaled 127,000 acres, of which 45,000 acres were harvested for beans producing 630,000 bushels, 50,000 acres harvested for hay, and 32,000 acres grazed or plowed under. Last year 108,000 acres of soybeans were grown alone, with the bean acreage totaling 35,000 acres and production 595,000 bushels, hay acreage 45,000, and acres grazed or plowed under 28,000.

POTATOES The 1943 potato crop was 6 percent larger than last year—acreage was up 12 percent but yield down 6 percent. A prolonged period of dry weather from early July to late September lowered yields considerably in all sections of the State except Potter County.

TOBACCO This was a poor tobacco season for the second year in succession. Early plantings were better than the late in Lancaster County. Dry weather cut yields of Havana Seed but the crop was of good quality.

HAY Bumper crops of first cuttings of alfalfa, clover and timothy hay were made in all sections of the State but yields of later cuttings of alfalfa and clover were materially reduced by dry weather, which also lowered yields of soybean and grain hay.

FRUITS All fruit crops were short this year. Compared with the 10-year (1932-41) average production, apples were down 44 percent, peaches 29 percent, pears 69 percent, and grapes 15 percent. Apples were generally undersize—even smaller than anticipated before harvesting got under way. Apples, peaches, and pears brought exceptionally good prices, reflecting the short crops and strong consumer demand.

PENNSYLVANIA FARM LIVESTOCK INVENTORY, JANUARY 1, 1944

TOTAL combined farm inventory numbers of the five species of livestock (horses, mules, cattle, sheep, and hogs) on Pennsylvania farms January 1, 1944 increased about 6 percent over January 1, 1943. Percentage changes between the two first-of-the-year inventories were as follows: cattle, up 3 percent; hogs, up 20 percent; sheep, down 3 percent; horses, down 3 percent; mules, down 5 percent. Chicken numbers increased 7 percent and turkeys 6 percent during the year.

Aggregate farm inventory value of the five livestock species increased 6 percent from January 1, 1943 to January 1, 1944. Changes in values per head over a year ago were: cattle, up 8 percent; mules, up 4 percent; sheep, down 10 percent; hogs, down 34 percent; horses, no change. Milk cows increased 12 percent in value per head compared with increases of 3 percent in New York, 3 percent in Ohio, 0 percent in Michigan, 10 percent in Wisconsin, and a decrease of 2 percent in Minnesota.

HORSES Horse and mule numbers, which have been declining each year
AND for more than 25 years, declined still further in 1943. Stallions
MULES registered during 1943 by the Bureau of Animal Industry, Pennsylvania Department of Agriculture, numbered 269, compared with 320 in 1942, 396 in 1941; 438 in 1940, and 453 in 1939.

CATTLE The number of cattle and calves on farms January 1, 1944 was 3 percent greater than a year previous and the highest since 1920. All classes of cattle, except steers which declined 6 percent, participated in this increase, gains in numbers ranging from 2 percent for heifer calves for milk to 23 percent for beef cows.

HOGS Hog numbers on Pennsylvania farms increased 20 percent during 1943, with pigs under six months showing an increase of 24 percent, sows and gilts a decrease of 19 percent, and other hogs six months old and over an increase of 27 percent. The combined 1943 spring and fall pig crop was 33 percent greater than the 1942 crop and the indicated number of sows to farrow this spring is 10 percent less than the number farrowed last spring.

SHEEP The number of sheep on farms declined 3 percent from January 1, 1943 to January 1, 1944. Ewes, wethers and rams one year old and over were responsible for this decrease since ewe, wether, and ram lamb numbers increased.

POULTRY Chicken numbers on Pennsylvania farms increased 7 percent and turkey numbers 6 percent from January 1, 1943 to January 1, 1944. Intended purchases of baby chicks in 1944 by Pennsylvania farmers show a decline of 17 percent from purchases in 1943, according to the results of a survey of crop correspondents made February 1. Some differences between intentions and actual purchases may be expected, depending upon egg prices during the hatching season and the egg-feed and chicken-feed price relationships. The results of a recent survey show that turkey growers in the State plan to raise 9 percent more turkeys this year than in 1943.

PRINCIPAL CROPS IN PENNSYLVANIA, RANKED BY VALUE, 1943

Crop	Rank	Value
Corn	1	\$65,890,000
Tame hay	2	58,123,000
Potatoes	3	33,394,000
All wheat	4	20,556,000
Comm'l truck crops	5	18,715,000
Apples (comm'l)	6	12,675,000
Oats	7	12,646,000
Tobacco	8	7,455,000
Peaches	9	4,822,000
Barley	10	2,832,000
